WEBINAR: Learning from others' mistakes – privacy and cyber security update

Welcome! We will be starting the live webinar at 1.00 pm AEST.

Craig Subocz Senior Associate

Stephanie Quatela Associate

If during the webinar you have any questions or comments please use the chat box to type.

If at any time you experience any technical problems, please refresh the page (F5) or use the 'Reconnect' button

CONNECTION PROBLEMS?

RECONNECT

Webinar Housekeeping

• This webinar runs best using Google Chrome as your browser, if at any time you experience any technical problems, please refresh the page (F5) or use the 'Reconnect' button CONNECTION PROBLEMS? RECONNECT

- Throughout the webinar if you have any questions or comments please use the chat box, we will endeavour to answer as many as we can at the end of the presentation
- We will have multiple pop ups during the webinar, including some live polls and documents for you to download. Feel free to interact!

 Download PDF handout
- Feedback survey made available at the end of the webinar

Where we have been

March 2014

February 2018

May 2019

August 2019

- Privacy Act rewritten
- APPs replaced NPPs

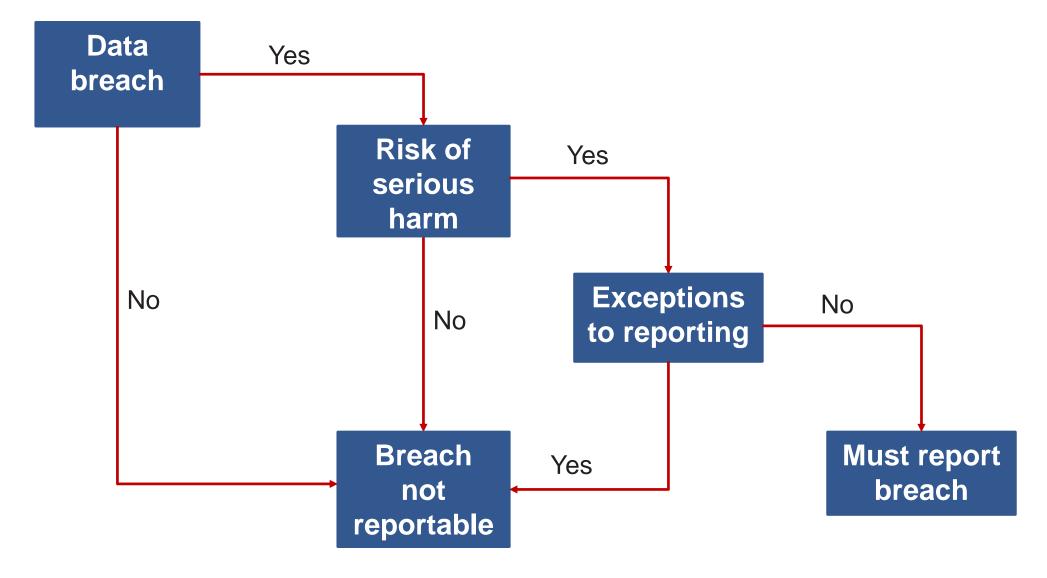

- Mandatory data breach notification takes effect
- Over 900
 breaches
 reported
 from April
 2018-March
 2019
- Numerous breaches hit the media
- Slight decrease in number of NDBs reported when compared to 2018

What's the big deal about privacy?

- Any Australian entity turning over \$3+ million a year must comply with the *Privacy Act*
- Entities handling 'health information' must also comply, regardless of turnover
- Compliance won't make you money
- > Get it wrong, it will cost you money
- > 22 February 2018 new data breach notification laws

When should a breach be reported?

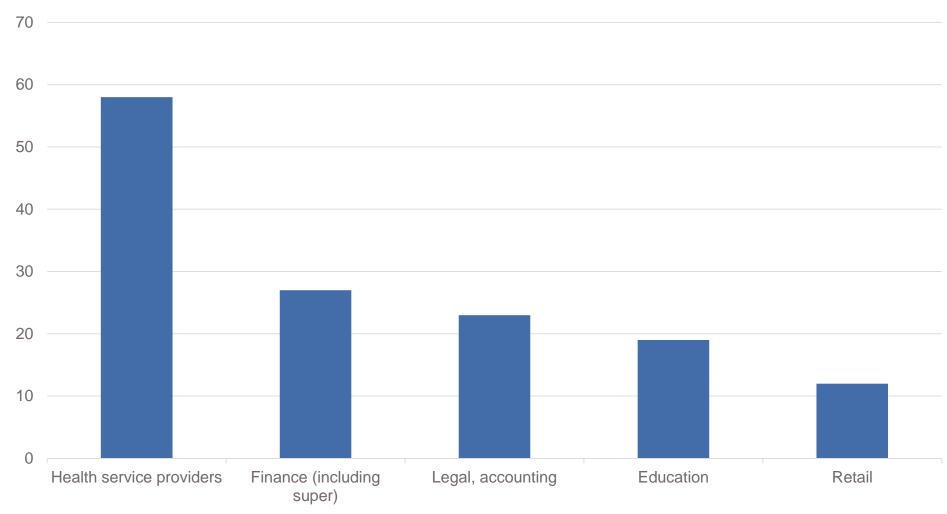

What's happened so far?

- > Every quarter, OAIC publishes data on breaches reported during the quarter
- > Reports accessible via OAIC website
- Now have data for 2018 and 1 Jan to 31 March 2019
- Over 800 breaches reported (averaging about 250 breaches per quarter)

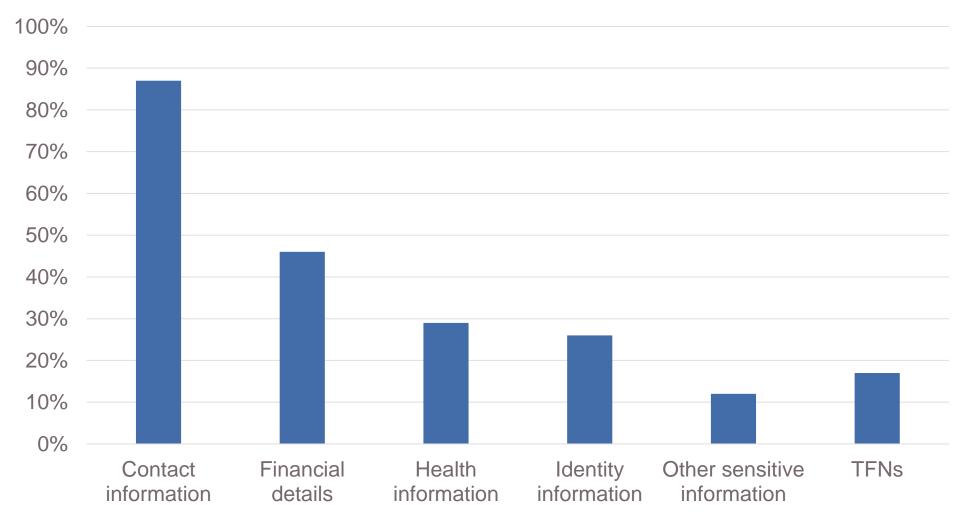

Industry sectors reporting breaches (Q1, 2019)

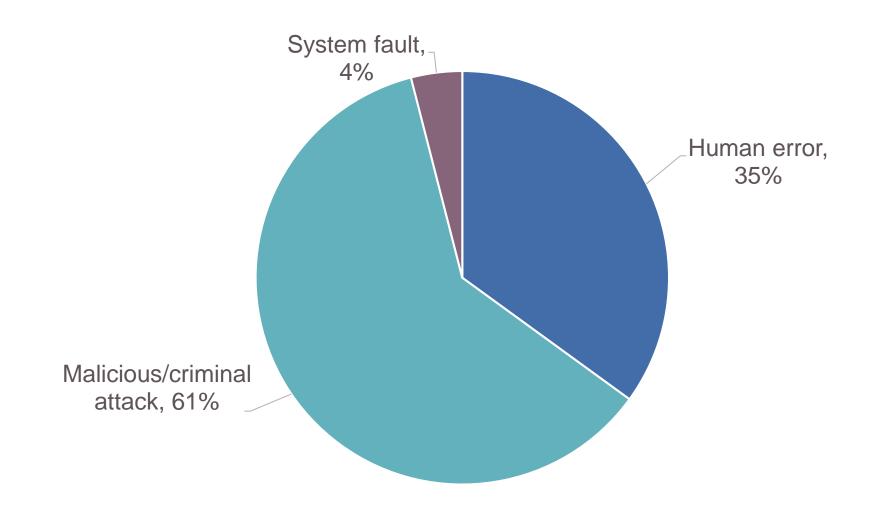

Types of information involved (breaches reported Q1, 2019)

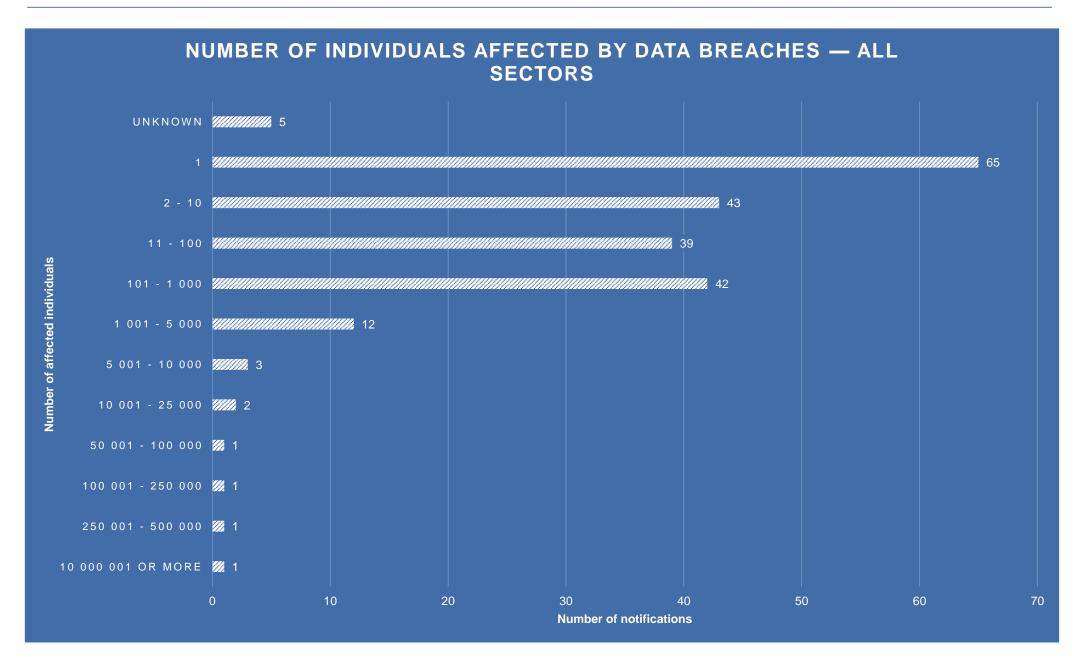

Sources of breaches reported – 1 January to 31 March 2019

Number of people affected – Q1, 2019

Reminder for questions

February 2019: Australian Parliament IT system breached

> 8 February 2019:

Security breach strikes parliament's IT network

By Justin Hendry Feb 8 2019 10:29AM All passwords reset.

> 18 February 2019:

Scott Morrison reveals foreign government hackers targeted Liberal, Labor and National parties in attack on Parliament's servers

By political reporter Brett Worthington Updated 18 Feb 2019, 3:03pm

> 10 April 2019:

ASD confirms data stolen in Parliament IT breach

By Justin Hendry Apr 10 2019 12:37AM But exfil only netted nonconfidential data.

February 2019: Australian Parliament IT system breached

- Department of Parliamentary Services conceded that not all elements of the Essential Eight (https://www.cyber.gov.au/publicat ions/essential-eight-explained) had been implemented
- > Balance between flexibility for parliamentarians and cyber resilience

February 2019: Australian Parliament IT system breached

Take precautions

- > the sensitivity of your data
- the consequences if your data is exposed
- > your budget
- > balance between tight security and user experience

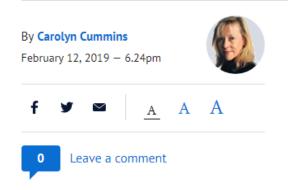

Public Transport Victoria (now Department of Transport) - July 2018

- Found to have breached privacy laws PTV released a dataset containing 15 million partially redacted public transport passenger details online
 - Dataset included 1.8 billion records of touch-on and touch-off activity from 15 million myki cards
- Actual breach exposure of myki user's histories that could be used to identity individuals
 - > Information Commissioner: "Your public transport history can contain a wealth of information about your private life. It reveals your patterns of movement or behavior, where you go and who you associate with."
- > DoT Issued with a compliance notice requesting it to strengthen its policies and procedures, including around data governance.

February 2019: LandMark White breach

> Sydney Morning Herald, 12 February 2019

Home loan details of 100,000 customers hacked in major data breach

The nation's biggest banks are scrambling to contact up to 100,000 customers who may have been caught up in a major data breach at property valuation firm, LandMark White.

The breach, which LandMark White first revealed late on Friday, could include property valuations and personal contact information of home owners, residents, and property agents, including first and last names, residential addresses and contact numbers.

February 2019: LandMark White breach

- LMW published a detailed explanation of the breach on its website
- > Blamed the leak of data on a security vulnerability in its IT network
- Took steps to close the leak once discovered
- > But the breach affected data collected over multiple years

> 21 February 2019

Toyota Australia Statement Re-Attempted Cyber Attack

TOYOTA

Toyota corporate logo.

Toyota Australia can confirm it has been the victim of an attempted cyber attack.

At this stage, we believe no private employee or customer data has been accessed.

The threat is being managed by our IT department who is working closely with international cyber security experts to get systems up and running again.

At this stage we have no further details about the origin of the attack.

We apologise for any inconvenience caused and thank customers for their patience.

Toyota likely would have been required to assess the circumstances of the breach to determine whether it was an eligible breach

> 30 days to complete the assessment

If confirmed to be an eligible breach, an entity must notify OAIC and affected individuals as quickly as possible

- Toyota not compelled to publicise any information about the breach if it is not an 'eligible data breach'
- Eligible breach = if the breach would give rise to a risk of serious harm
- > Serious harm decided by weighing a number of factors

```

> Factors include:

- > the nature of the data
- > the sensitivity of the data
- > whether security measures protect the data
- who did or could have obtained access to the data
- > the nature of the harm

- > Evidently, Toyota Australia assessed the circumstances of the breach as such that it would not require reporting (i.e. it was not an eligible data breach)
- Either individuals affected by the breach were not at risk of serious harm or Toyota Australia had taken remedial action to remove the risk of harm

March 2019: Kathmandu breach

- > Unauthorised online store access by 3rd party
- > From Kathmandu's own website:

Website Data Security Incident

HOME / WEBSITE DATA SECURITY INCIDENT

13 March 2019

We have recently become aware that between 8 January 2019 NZDT and 12 February 2019 NZDT, an unidentified third party gained unauthorised access to our website. During this process, the third party may have captured customer personal information and payment details entered at check-out for potential fraudulent use.

As soon as we became aware of this incident, we took immediate steps to confirm that our online store and our wider IT environment was secure. Since this time, we have been working closely with leading external IT and Cyber Security consultants to fully investigate the circumstances of the incident and confirm which customers may have been impacted.

March 2019: Kathmandu breach

- > Kathmandu notified potentially affected customers directly
- Siven the nature of the breach, it was obviously reportable under the *Privacy Act* and under the Corporations Act 2001 (Cth) and ASX Listing Rules

Mitigating against a data breach

- Resources are available to help a company reduce the risk of a breach
- > ASIC publishes a good practice guideline on cyber resilience, as well as a list of questions directors should ask management about cyber resilience
- APRA requires regulated entities to comply with a prudential standard on cyber resilience

Dealing with a data breach

DON'T PANIC!

Dealing with a data breach

- > Prevention better than cure
- > Assess and update privacy policy
- > Review contracts with key suppliers
- > Train staff
- > Develop and test data breach response plan
- > Insurance?

Data breach response plan

- Sometimes the best prevention won't stop the breach
- Have a plan to deal with a breach
- > Being caught without a plan is a recipe for losing control of the message
- Lose control of the message; lose your reputation

Data breach response plan

The plan is an important tool to manage a breach It sets a structure for managing your response to a breach and to comply with statutory obligations

> Senior management oversight and board approval

Includes:

- > the actions to take if a staff member suspects or discovers a data breach
- > the members of the data breach response team (internal/external)
- > the actions the response team should take
- > a communications strategy

Response team membership

- > If a data breach is detected, important to respond promptly
- > Reporting to a team leader and ultimately CEO, comprises:
 - > Privacy officer
 - > Legal
 - > Risk management support
 - > ICT and HR support
 - > PR/Communications support ideally with media training

Dealing with a data breach – Do's and Don't's

DO DON'T

Act expeditiously

Be proactive

Be honest

Get assistance

Everything necessary to contain the breach

Evaluate risk to individuals exposed

Determine if notification is necessary

Take steps to prevent the breach from occurring again

Communicate with empathy and transparency

Investigate and obtain insurance

Panic

Ignore the issue

Be dishonest

Let concerns about being sued stop you from complying with your obligations

Be reactive

How to craft a notification

- > The *Privacy Act* states that a public notification posted to a company's website satisfies the statutory requirement
- > Both Kathmandu and LandMark White published notification of their breach on their respective websites
- Worth reading to see how a data breach notification works in practice
